EDUCATION

Georgia Institute of Technology

Master of Science in Analytics (Computational Data Analytics Track)

Atlanta, Georgia

Aug 2025 – Dec 2026

- Coursework: Machine Learning, Deep Learning, Data and Visual Analytics, High Dimension Analytics, Operations Research

National Chengchi University

Bachelor of Arts in European Languages and Culture

Taipei, Taiwan

Sep 2015 – Jun 2020

SKILLS

Programming:	Python, R, JavaScript, SQL, PHP
Libraries & Frameworks:	NumPy, Pandas, Matplotlib, scikit-learn, PyTorch, TensorFlow, NLTK, OpenCV, YOLO
Tools & Platforms:	AWS, Linux, Git, GitHub, Docker, Power BI, Tableau, LaTeX
Languages:	English (fluent), Spanish (intermediate), Mandarin (native)

EXPERIENCE

OurScool Education Inc.

Data Scientist

Taichung, Taiwan

Jan 2023 – Jan 2024

- Designed and maintained ETL and feature engineering pipelines in Python and SQL to extract and transform data from a learning platform and ERP/CRM system into structured, model-ready inputs.
- Performed customer segmentation and churn prediction using SQL and Python, improving user retention by 20%.
- Implemented NLP pipelines and A/B testing to guide product and UI decisions, increasing conversion rates by 15%.
- Built Tableau dashboards to monitor user engagement, churn, and retention, supporting product and marketing decisions.

OurScool Education Inc.

Technical Product Manager

Taichung, Taiwan

Jan 2022 – Jan 2023

- Led and designed a data-centric ERP system supporting orders, inventory, payments, and user activity tracking.
- Defined data requirements and KPIs with engineering and business teams to enable reliable reporting and analysis.
- Partnered with engineers to design relational databases and APIs supporting reporting, dashboards, and analytics workflows.
- Analyzed user behavior and operational data to inform product improvements and prioritize feature development.
- Supported deployments on AWS and Docker, improving system reliability and reducing production errors by 12%.

Walnutek Inc.

Junior Software Engineer

Taipei, Taiwan

Jun 2021 – Dec 2021

- Built end-to-end ML pipelines using Python and scikit-learn for risk prediction, churn modeling, and performance forecasting across healthcare, insurance, manufacturing and education domains.
- Built NLP pipelines using NLTK, web scraping, and text classification to analyze student sentiment and enrollment trends across social media and education forums, informing recruitment strategy.
- Implemented computer vision models for breast cancer classification on hospital ultrasound images using OpenCV and YOLO to localize lesions and distinguish normal and abnormal cases.
- Processed large-scale datasets and productionized ML workflows using Selenium, Pandas, SQL, Docker, and Git.

PROJECTS

End-to-End AI System for Smarter Retail Marketing ([GitHub Repo](#))

Developed an end-to-end AI tool for retail marketing, combining image-based product tagging (MobileNetV2, DeepFashion), purchase prediction (XGBoost), and LLM-based ad-copy generation (DeepSeek via Hugging Face API), with outputs integrated into an inventory-aware ranking system to optimize promotions.

Customer Churn Prediction Model ([GitHub Repo](#))

Built a churn prediction model on a telecom dataset using EDA, feature engineering, and classification algorithms (Logistic Regression, Decision Trees, XGBoost), achieving ~80% accuracy and actionable retention insights.

LICENSES & CERTIFICATIONS

- | | |
|--|----------|
| • Project Management Professional (PMP) Project Management Institute | Jan 2024 |
| • Machine Learning Specialization Coursera | Mar 2025 |
